

Data Analytics Business Report

Project Title

CoreTech Innovation Business Performance Analysis

Dataset Overview

The CoreTech Innovation dataset contains information about clients, services, project budgets, project status, payment status, lead sources, client ratings, and client cities. The dataset includes 50 records and was used to analyze business performance and identify key trends.

Tools Used

- Microsoft Excel (Data Cleaning & Analysis)
- MySQL (SQL Queries)
- Power BI Desktop (Dashboard & Visualization)

Data Cleaning Summary

The dataset was cleaned and formatted before analysis. Missing values were identified and corrected. Duplicate records were checked and removed. Date columns were formatted properly, project budgets were converted into currency format, and text values were standardized for consistency. Filters were also applied to improve data analysis.

Charts Summary

The following charts were created to visualize business performance:

- Revenue by Service
- Project Status Distribution
- Clients by City
- Payment Status Distribution
- Lead Source Performance
- KPI Dashboard Visuals

KPI Summary

- Total Clients: 50
- Total Revenue: 298K
- Average Project Budget: 5.96K
- Completed Projects: 16
- Pending Projects: 14
- Average Rating: 4.29
- Top Performing Service: Data Analytics
- Best Lead Source: LinkedIn

Key Insights

1. CoreTech Innovation successfully managed projects for 50 clients.
2. The company generated approximately 298K in total revenue.
3. Data Analytics is the highest revenue generating service.
4. LinkedIn is the most effective lead source for acquiring new clients.
5. The average project budget is approximately 5.96K.

6. The average client rating of 4.29 reflects good customer satisfaction.
7. Several projects are still pending and require closer monitoring.
8. Some project payments remain unpaid, which may impact cash flow.

Business Problems

1. Pending projects can slow business operations.
2. Unpaid projects may delay revenue collection.
3. Some services contribute less revenue than others.
4. Business growth relies heavily on a few lead sources.
5. Project completion efficiency can be improved.

Recommendations

1. Increase investment in Data Analytics services because they generate the highest revenue.
2. Expand marketing activities on LinkedIn to attract more potential clients.
3. Improve project tracking and monitoring processes to reduce pending projects.
4. Strengthen payment follow-up procedures to reduce unpaid projects.
5. Promote lower-performing services through targeted marketing campaigns.

Conclusion

This report analyzed the business performance of CoreTech Innovation using Excel, MySQL, and Power BI. The analysis revealed strong revenue generation, positive client ratings, and effective lead generation through LinkedIn. Data Analytics emerged as the top-performing service. However, the company should focus on reducing pending projects and improving payment collection. Implementing these recommendations can improve efficiency, profitability, and future business growth.
